

Ω/T Premium Class

The **European hose standard EN 12115** is divided into four classes of chemical and universal hoses according to their electrical conductivity: Ω/T, Ω, M/T and M.

Ω/T hoses can be called the premium class of hoses. They can discharge the electrostatic energy from the inside to the outside of the hose wall. Also, they can be securely used when stray currents occur in the environment.

This makes Ω/T hoses ideally suitable for flammable liquids and gases as well as for the use in Ex-Zones.

Chemical hoses to EN 12115, easily selected:
