

ONLINE CONFIGURATION FOR MANN TEK

Elaflex has extended its online configuration tool to cover the Mann Tek product range, which includes safety breakaway and dry disconnect couplings, specialised couplings, ball valves and swivel joints.

The tool provides purchasers, consulting engineers and end users a time-saving and easy to follow information and quotation platform, without the need for reading and comparing data sheets, catalogue pages, brochures and so on. "The configurator makes it possible to combine and visualise the required coupling," says Elaflex.
