

Seaworthy.

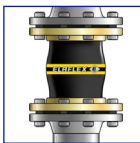

ELAFLEX Expansion Joints Type ERV.

For piping systems on ships, you will need compensators - to absorb thermal expansion, to reduce vibration and noise.

ERV rubber expansion joints will reliably do this job.

They are type approved by a large number of Notified Bodies (classification companies for ships), e. g. for the use in ship's engine rooms.

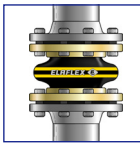

There are high requirements for this task.

Flame resistance tests, pressure impulse tests, burst pressure tests, endurance tests with movements: Our 'Yellow Steel' expansion joints passed all necessary trials and are approved to the 'Marine Equipments Directive'.

Premium quality, made in Germany.

Quick delivery service possible upon request.
