

Easy handling for heavy business.

Our New 'LTX' Hose for Gravity Discharge

ELAFLEX is a leading manufacturer of refuelling equipment, e.g. petrol station nozzles, hoses and couplings for chemicals and petroleum based products.

We are proud to introduce our new innovative hose, the LTX, constructed for gravity discharge from road tankers to petrol station storage tanks. It fulfills all tanker operators demands. LTX is extremely flexible, also in the winter. It is lighter than any comparable hose you know. It is more enduring and has a longer service life than other gravity discharge hoses. It has no external metal helix which can hook when stowing the hose away. It simply is a pleasure to work with.

You might see it as a bonus, that the LTX hose is also suitable for Stage Ib vapour recovery, and for connection of electrical safety devices such as ASS/QSS systems. Last not least, the economical pricing of the LTX will contribute optimised results in your daily business.

Available in DN 80 (3") and DN 100 (4")
