

Flexible resistance.

ERV-VITEX : Expansion Joints with FPM Lining

For pipe construction, you will need compensators - to absorb thermal expansion, to reduce vibration and noise.

The new type ERV-VITEX with FPM fluor rubber lining is recommended for solvents and fuels with an aromatic content of more than 50 percent. Standard expansion joints are unsuitable for this application.

Because of its special reinforcements of nylon cord, ERV-VITEX is very flexible and offers a wide range of movement. Working pressure up to 16 bar.

Fast delivery ex stock for sizes DN 32 up to 200.
