Food & Beverage, Pharmaceuticals, Valves, Pipes & Fittings

Hose specialist Elaflex has complemented its product range for pharmaceutical, foodstuff and cosmetics industries.

In addition to PTFE-lined 'Elapharm' hoses, the new 'ElaSil' silicone hose range has become available. It is suitable for high media purity requirements and easy to clean. Typical applications include ultra filtration, fermentation, ultrapure water production, WFI (Water For Injection) and use as transfer hose. It conforms to FDA and USP Class VI and meets the 3-A Sanitary Standard. The homogeneous hose construction consists of a smooth lining and cover of platinum-cured, translucent, phthalate-free silicone and shows a combination of highest flexibility and good kink resistance, throughout its large temperature range from -60° C to +200° C.

Hoses are assembled to customers specification, with crimped couplings. Hose sizes DN 13 to 102 mm are available ex stock, together with a large range of commonly used hose fittings.
