

Chose the right Hose?

**FHD –
the reliable
bunkering hose**

Since 1967, we supply the hose type **FHD**. It is a collapsible hose for the transfer of petroleum based products - used for civil (e. g. bunker ships) and military (e. g. ship-to-ship transfer) applications.

Flat laying hoses for pressure service save space on board and are easy to handle - but they underly a lot of strain.

Therefore you should only use premium quality which we guarantee for the FHD type. It meets EN 1765-type L, and the military standard VG 95955.

Together with perfectly suitable hose couplings, tested and certified: Reliable refuelling equipment, made by Elaflex.
