

# POLYPAL<sup>®</sup> OIL

## Allrounder for the Terminal

For decades Elaflex 'Type TW' Yellow Band hoses have been setting the standard for the loading of tankers.

The refineries' fuel package output gets ever more complex. New fuel types and increased quantities of aromatics and other additives might have an adverse effect on the longevity of the lining of a standard hose.

Your loading hoses at the gantry have to adapt. For terminals where gasoline fuel types and additives often change or may be unknown, we recommend the POLYPAL OIL with its universally resistant UPE lining.
