

**"I can see clearly now":
New Generation DN 25 mm Sight Glasses**

A new range of sight glasses is available from Elaflex. The **SG** units are designed to enable motorists to see the fuel either at the dispenser or nozzle end, enhancing the fuelling experience as well as inspiring confidence in the product dispensed.

Elaflex sight glasses come in a range of thread sizes and versions either for standard or vapour recovery nozzles. The standard version is also available with a propeller to visualize the flow.

The sight glass body is made of lightweight aluminium with a high end coating to prevent oxidation in the field. The impact-resistant synthetic glass allows the sight glasses to have four large windows in order to have maximum visibility of the fuel.

SG sight glasses are German TÜV approved to EN 13617-1. This also includes an impact test.

The new catalogue page 531 is ready for download. For more information or samples please contact the ELAFLEX sales team.
