

## Terminal To Nozzle - Elaflex at the PetroTrans

At this year's PetroTrans show (1st to 3rd October) ELAFLEX will be presenting their product range for road tankers: refuelling equipment from the refinery to the end customer

Under the slogan 'Terminal To Nozzle' we will show tank truck and bunkering hoses, couplings, nozzles, and rubber expansion joints.

### Novelties 2014:

- **VLTX hose couplings** available in 3" und 4" with aluminium hose tail, for LTX lightweight gravity discharge road tanker hoses for lowest overall hose weight.
- AdBlue urea solution: The renown **UTL** hose now also comes in size **DN 38** - the ideal dimension for road tanker deliveries: space-saving, easily reelable, providing an optimal flow rate. For this application, 2" DDC Dry Disconnect Couplings of stainless steel are the established standard coupling. On the refuelling side we will also show the the new ZVA AdBlue LV nozzle intended for the urea solution filling of Diesel powered light vehicles / vans.
- The **Polypal CR** with its Chloroprene cover and UPE inner lining is a new universal hose suitable e.g. for the transfer of petroleum based products with high aromatic content. Contrary to other universal hoses, also the cover of this hose is resistant to abrasive substances. Used at refineries and terminals; sizes: DN 50, 75, 100.
- Due to possible dangerous corrosion, tanker hoses exposed to road salt during winter time should not be equipped with standard aluminium clamps. We now offer Spannfix pinned safety clamps **SX 50** made of **stainless steel**.
- LPG: The HiFlo nozzle GG10 and new accessories will make the work of tank truck drivers safer: The new **45° swivel** helps to reach difficult to access filling points A new **parking adapter**, attached to the interlock, increases safety while the nozzle is not in use. And the newly-developed back-check valve **GG11**, applied between nozzle and filling point, also serves for improved operation safety. As an option, it is available with an additional pressure relief screw.
- Online service: please try out our **Hose Assembly Configurator**. Choose from many options your required hose and coupling types: <http://hoseconfigurator.elaflex.de>
