

Fuel Grade Identification for ZVG 2 Nozzles

In order to ensure clear information on which fuel is suitable for a vehicle, the EU Commission prescribed the marking of fuel types on dispensers, nozzles and vehicles.

Until autumn 2018, all filling points have to be equipped with the new fuel grade identification to EN 16942:2016 – also for Autogas.

For their ZVG 2 Autogas nozzles, refuelling equipment manufacturer Elaflex provides the new **scuff-guard with integrated Fuel Grade Identification** to meet the new standard.

The scuffguard is available in black or orange and can be retrofitted on-site. Additionally to the Fuel Grade Identification it offers a large space for custom made designs and advertisement.

Further information and part number breakdown – please see: [Elaflex Information 4.17 E](#)

Assembling hints – please see: [Manual EA866](#)

'Advertising Space' standard designs:

Example: ZVG 2 ACME with EA 866 orange

Example: ZVG 2 DISH with EA 866 black
